

No matter what the size or shape

ScripCheck

A verifying and counting tool you can count on

Dear Pharmacist,

It's the first Monday of the month, at 3:00 p.m. You and your two technicians have been in a panic all day just trying to keep up. Between doctor calls, patient consultations, checking scrips filled by your technicians, and filling your own scrips, it's been a madhouse! In fact, you have processed 200 or more prescriptions, and the after-work rush is just starting. The line is already starting to form, with no end in sight. You might fill another 100 scrips before you close tonight!

Then, up to the counter comes Mrs. Smith. She has a question about two of her prescriptions, and from past experience, you know it will take a few minutes to explain it. Just then a doctor's office calls to talk to you about another patient, and the whole time you are trying to check the scrips being filled to make sure they are correct! Did that scrip get counted correctly? Is that med in the right patient bottle?

You need help! You need a tool that can help you and your staff be more accurate, confident, and profitable. That is why we developed ScripCheck.

SCRIPCHECK

ScripCheck is an easy-to-use, computer-based verification and counting tool. It was designed to perform two primary functions:

- Verify that the right medication is matched with the right prescription, and
- Accurately count the number of pills dispensed.

This allows you to make some of your knowledge available to anyone you choose, and frees you up to do some of the more important things, like counseling patients.

SCRIPCHECK INCLUDES:

VERIFICATION

ScripCheck verifies by comparing the NDC number printed on the vendor bottle to that printed on the patient label to see if they match. If they match, ScripCheck allows the operator to count the pills. By matching the drug to the patient label, you can be sure you are dispensing the right drug to the right patient.

COUNTING

The counting function uses a weight-based technique to count the number of pills poured into the tray. Scan the vendor bottle, and then pour the pills in the tray. When you reach the desired count, simply lift the tray off the scale and pour the pills in the bottle. ScripCheck resets itself for the next prescription.

SECURITY

Password options have been designed to give the pharmacist control over certain functions. ScripCheck will not allow the operator to perform those functions if the password is not known.

SYSTEM REQUIREMENTS

- Computer running Windows 98 or greater
- CD-ROM drive
- Floppy drive
- One available serial (com) port

FREQUENTLY ASKED QUESTIONS

Why ScripCheck?

ScripCheck is flexible, small, simple, and very affordable. ScripCheck is also backed by a company that has been in the pharmacy systems business for over 18 years. We work hard to provide the best products and the best support. You can trust us to continue that tradition with ScripCheck.

How accurate is ScripCheck?

In actual use, our tests show that ScripCheck will be exactly accurate 95% of the time. 4% of the time ScripCheck tends to undercount by one pill. It is rare that ScripCheck is ever off by more than one pill.

How fast does ScripCheck count?

The pharmacists that use ScripCheck indicate that, for quantities of more than 30, ScripCheck is faster than hand counting. For quantities of 30 or less, ScripCheck counts about the same speed as by hand. However, ScripCheck does not need your undivided attention to get the count right, like hand counting requires. And when it is time to take inventory, there is no comparison!

Does ScripCheck have any warranty/guarantee?

We believe ScripCheck is the best product of its kind, so we back our product with a 30-day money back guarantee. After 30 days, ScripCheck is covered by a full one-year warranty.

I don't need the counting capabilities. Can I buy the verifying functions separately?

Yes, you can. We anticipate that many stores will buy one or two full systems, and then set up a few stations for verification only. We make ScripCheck Lite that accommodates this need.

TESTIMONIALS

“...The ScripCheck system developed by Cost Effective Computers is the ABSOLUTE BEST system I have ever witnessed to improve both accuracy and speed. . . And as a price-conscious new storeowner, ScripCheck is very affordable. It will pay for itself in about 3 months in my practice.”

Jerry Grimmitt
Longley Pharmacy
Rossville, Georgia

“...ScripCheck has enabled our pharmacy to create a more efficient work flow, and ensures that the correct drug is being used and the correct amount is dispensed. We are finally able to have a perpetual inventory system that prevents shortages to our customers. I also like the idea of increasing our dispensing speed without spending thousands of dollars on automated filling equipment. It is a small price for “peace of mind” and efficiency.”

Joe Saffles D.Ph.
Little Drugs
Sweetwater, TN
